

NLC VACTROL PILL

vactrol controlled 4046, crude VCO

<https://www.nonlinearcircuits.com/modules/p/vac-pill>

NOT TESTED

andrew on muffwiggler thread:  
a friend showed an interesting mod on this module. He used a flashing/animating LED and suggested trying a flickering LED as well, such as this one On ebay, get about 10 for \$2 with free shipping; search - rgb flashing led 5mm What happens is the different colours have different Von, so the oscillator frequency changes as the LED steps thru the different colours. You have to patch in a CV or offset voltage to turn on the vactrol and display LEDs of course. Once on, the animating LED steps thru its colours and changes the frequency nicely along with the colour changes - a very cool effect.
